Honduras Forestry Risk Mitigation Guide

This guide provides an overview of the risks that timber was harvested, transported or traded illegally in Honduras and the actions that can be taken to mitigate those risks. The guide can be used by any company wishing to reduce the risk that the timber it is buying is illegal. The guide relates only to timber harvested in Honduras – not to material imported into Honduras.

To use this document, you should:

- Look up the legality risks that exist for the timber source types in Honduras using the left-hand column of the table below. The risks are listed by type of law-category (first column) and the timber source type (second column).
- Determine whether or not there is a chance that this risk applies to your supply chain. Use the second column in the table below to help you determine whether this risk is applicable, and the third column in the table below to show you the goal you're aiming for. If there is a risk in your supply chain, you have to carry out risk mitigation activities to the point where you can demonstrate that the risk of illegality is negligible.
- Look up the potential actions that you could take to address each of the specified risks using the two right hand columns of the table below. This list provides suggested actions that you could take. Note that it is possible that there are other actions – not listed below – that you could take to assure yourself that your timber has negligible risk of illegality.

Navigate this document through Timber Source Types

To use this risk mitigation guide, you will first need to determine the origin of your timber. You have to identify not only the country, but also the type of forest the timber comes from in terms of ownership, management, classification and permits – this is called the Timber Source Type. This information is very important in order to find out which risks are related to your specific supply chain and your timber products, and how you can mitigate these risks.

Here is a description of the different kinds of Timber Source Types, you will find in Honduras:

Source Type 1: National public forest:

Wood coming from forests in government areas assigned to private individuals or communities through a management contract which may be short-, medium- or long-term

Source Type 2: Municipality-owned (ejidales) – public forest:

Wood coming from forests under areas owned by municipalities assigned to private individuals or communities through a management contract which may be short-, medium- or long-term

Source Type 3: Private forest:

Wood from privately owned natural forests

Source Type 4: Forest plantations:

Wood from plantations, which can be publicly, privately and municipality owned.

Source Type 5: Agro-forest plantation systems:

Wood coming from agroforestry systems with coffee or other crops grown in association with timber species

In column two below, you can see what Source Types the risks are applicable for.

Management and harvesting planning

Risk	Applicable to	Indicator of legal compliance	Potential mitigation actions	How to verify legal compliance (verifier)
<p>Harvesting without an approved plan</p>	<p>All types of forests</p>	<p>Harvesting shall only be conducted with a Forest Management Plan, an Annual Operation Plan, a salvage plan or a harvesting plan (plantation and agroforestry system)</p>	<p>Review and verify documents</p> <ul style="list-style-type: none"> • Forest Management Plan (FMP) • Annual Operating Plan (AOP) • Approved Salvage plan • Approved harvesting plan (plantations and/or agroforestry systems) 	<p>Find relevant key document examples in the Honduras Document Guide</p> <ul style="list-style-type: none"> • Verify that the FMP have been approved and registered with the corresponding municipality before development of the AOP. • Verify that the AOP is approved and the contents of the AOP shall be consistent with the planning proposed in the FMP.

			<p>Consult</p> <p>Consultation with authorities in the ICF (<i>Instituto de Conservación Forestal Áreas Protegidas y Vida Silvestre</i>) shall confirm that an approved plan exist for the harvested timber.</p>	
<p>Forest Management Plan and the Annual Operating Plans are not implemented correctly</p>	<p>National Forest, Municipalities Forest (<i>Ejidal</i>) and Private forest.</p>	<p>FMP and AOP are approved and valid and the activities included in them are followed and correctly implemented in the field</p>	<p>Review and verify documents</p> <ul style="list-style-type: none"> • Approved Forest Management Plan and Annual Operating Plans, including legal and administrative requirements as well as ICF's requirements with respect to technical norms and good management. <p>Consult</p> <p>Municipality authorities shall be consulted to verify the correct registration of the FMP and AOP.</p> <p>Field visit</p> <p>Required to verify the compliance in the field of the activities established in the FMP and AOP.</p>	<ul style="list-style-type: none"> • For the development of the AOP, the FMP shall be approved and registered with the corresponding municipality • The FMP and the AOP shall contain the legal and administrative requirements as well as ICF's requirements with respect to technical norms and good management. • The contents of the AOP shall be consistent with the planning proposed in the FMP. • Periodic field inspections shall be conducted to verify compliance with the activities established in the FMP and AOP • Documented evidence that the FMP and AOP have been approved in accordance with the technical and legal requirements stipulated by the ICF (registrations, technical rulings, approvals and reviews of FMP and AOP).

<p>Proper monitoring of social- and environmental requirements in the FMP is not conducted</p>	<p>National Forest, Municipalities Forest (<i>Ejidal</i>) and Private forest.</p>	<p>FMP and AOP are approved and valid and the social/environmental activities included on are followed and correctly implemented in the field .</p>	<p>Review and verify documents</p> <p>Forest Management Plan and Annual Operating Plans including protection and conservation areas on maps.</p> <p>Approved Forest Management Plan and Annual Operating Plans including legal and administrative requirements as well as ICF's requirements with respect to social and environmental norms.</p> <p>Consult</p> <p>Communities to verify harvesting activities has been communicated to them before beginning operations.</p> <p>Field visit</p> <p>Field visits to verify signage on the land of the protected and conservation areas</p>	<ul style="list-style-type: none"> • The harvesting activities shall be made known to the communities included in the areas before beginning operations (evidence such as meeting minutes and photographs). • Protection and conservation areas shall be defined by maps and indicated by signage on the land (site visits to verify signage). • The FMP and the AOP shall contain the legal and administrative requirements as well as ICF's requirements with respect to social and environmental norms. • Periodic field inspections shall be conducted in the field to verify compliance with the social and environmental activities established in the FMP and AOP.
<p>Inventory data is incorrect</p>	<p>National Forest, Municipalities Forest (<i>Ejidal</i>) and Private forest.</p>	<p>Inventories and management techniques shall follow the guidelines contained in the technical norms and regulations for the FMP and AOP according to the type of forest.</p>	<p>Review and verify documents</p> <ul style="list-style-type: none"> • FMP and AOP • Review the field inspection reports (done by ICF) to POA areas considering the conclusion in terms of volume/species. AOP contain detailed maps of the felling areas and volume/species data in accordance with the approved management plan. <p>Consult</p>	<ul style="list-style-type: none"> • Verify that in the FMP and AOP, inventories and management techniques follow the guidelines contained in the technical norms and regulations according to the type of forest. • AOP contains detailed maps of the felling areas and volume/species data in accordance with the approved management plan. • Periodic field inspections shall be performed to verify compliance of the

			<p>Consultation with authorities on whether the information in the inventory and treatments included on the AOP is consistent with approved forest management plans.</p> <p>Field visit</p> <p>Field visits to verify compliance of the information on the inventory and the treatments used match with the AOP.</p>	<p>activities established in the FMP and AOP</p> <ul style="list-style-type: none"> • Field inspection reports (done by ICF) to POA areas include relevant information on volume/species harvested. • Records/minutes of consultation showing consistent in terms of inventories and treatments.
<p>Trees are not marked correctly</p>	<p>National Forest, Municipalities Forest (<i>Ejidal</i>) and Private forest.</p>	<p>In the field, trees to be harvested (included on the AOP) need to be marked.</p>	<p>Review and verify documents</p> <p>AOP includes volume and number of trees approved to be harvested</p> <p>Field visit</p> <p>Field visits to verify the selected trees for harvesting match with the planning included on the AOP.</p>	<p>Recordings from field visits</p> <p>Marked trees in the field match with included on the AOP.</p>

Harvesting permits

Risk	Applicable to	Indicator of legal compliance	Potential mitigation actions	How to verify legal compliance (verifier) Find relevant key document examples in the Honduras Document Guide
<p>Harvesting without a permit</p>	<p>All types of forests</p>	<p>Legal procedures for harvest should be followed (harvesting permits approved by authorities and registration of the responsible personnel (contractors, technicians and machinery) shall be done before harvesting).</p>	<p>Review and verify documents</p> <ul style="list-style-type: none"> • Harvesting permits approved by authorities (depending on the sources, different documents will need to be approved and used before harvesting activities-see document guide) • Valid identification of contractors • Registration of personnel and machinery with the ICF. <p>Consult</p> <p>Authorities on the validity of the harvesting permits</p>	<ul style="list-style-type: none"> • Harvesting permits are in place. • Identification of contractors exist • Registration of personnel and machinery with the ICF need to be done before harvesting activity. • Authorities confirm the validity of the harvesting permits
<p>Irregularities in the approval and renewal of AOPs (including the preparation of Standing Timber Auctions (IFM))</p>	<p>National Forest, Municipalities Forest (<i>Ejidal</i>) and Private forest.</p>	<p>AOPs are approved based on the technical norms for each type of forest (Conifer and Broadleaf)</p>	<p>Review and verify documents</p> <ul style="list-style-type: none"> • Maps include correctly the boundaries of the felling areas 	<ul style="list-style-type: none"> • The ICF, through its staff and support organizations, such as the IFM, shall visit the sites to verify felling area boundaries, species and volumes.

e.g. payment of bribes.

- AOPs follow the existing technical norms for each type of forest (conifer and broadleaf)

Consult

Authorities (ICF and municipalities) on the validity of the AOP; and confirm the result from field visits done by staff from ICF in relation with felling area boundaries, species and volumes.

Consult interested third parties in the field about how the harvesting activities are done in terms of volume and boundaries respected in the area

Field visit

Field visit to verify that boundaries of the felling areas match with the maps of the AOPs.

- The areas to be harvested shall have a currently in force AOP
- The boundaries of the felling areas shall be identified on the land and on maps, and maps are verified as correct in the field
- The ICF, municipalities and interested third parties must confirm the validity of the AOP (the check shall be done in different hierarchy levels)

Manipulation of communal organizations to obtain Communal Forest Management Contract.

National Forest, Municipalities Forest (*Ejidal*)

Communal Forest Management Contracts shall be respected and establish between the state/municipality with communities

Review and verify documents

Communal Forest Management Contracts shall exist and follow legal requirements

Consult

Consultations with interested parties on the site about legal procedures to obtain the Communal Forest Management Contracts and if allegations of manipulation exist.

- Minutes from the consultation with the communities must confirm the validity of the Communal Forest management Contracts and the existence of allegations of manipulation of communities.

			Consultation with authorities (ICF and municipalities) that shall confirm the validity of the Communal Forest Management Contracts and if exist allegations of manipulation.	
Misuse of salvage plans, such as the authorization of these plans for other purpose	All types of forests	Salvage felling shall only take place when justified	<p>Consult</p> <p>Consultations with interested parties in the field about whether salvage plans that have been granted are justified</p> <p>Consultation with authorities (ICF and municipalities) on the validity of the salvage plan</p> <p>Field visit</p> <p>Field visit to verify the correct use of salvage plans and checked the areas to identified the compliance with the measures included on the salvage plan.</p>	<ul style="list-style-type: none"> • The areas to be harvested through a salvage plan should be justified and follow the conditions and measures included on this salvage plan. • The ICF and municipalities confirm the validity of the salvage plan. • Consultations with interested parties in the field about areas where the salvage plans have been granted.

Payment of royalties and harvesting fees

Risk	Applicable to	Indicator of legal compliance	Potential mitigation actions	How to verify legal compliance (verifier) <small>Find relevant key document examples in the Honduras Document Guide</small>
<p>Evasion of fees through corruption/ bribery</p>	<p>All types of forests</p>	<p>Payment of taxes and administrative fees shall have been paid.</p>	<p>Review and verify documents Receipts and invoices for the payment of taxes and administrative fees.</p> <p>Consult Authorities (ICF and municipalities) to confirm the validity of the receipts.</p>	<ul style="list-style-type: none"> • Consultations with ICF and municipalities to verify the payment of administrative and municipal fees • Receipts and invoices shall be stamped and signed by the applicable authority, and show the payment of taxes and administrative fees.
<p>Altering harvest volume data to reduce charges</p>	<p>All types of forests</p>	<p>Payment of charges need to be in line with the real volume harvested.</p>	<p>Review and verify documents Verify volumes, species and quantities reported on invoices match the fees charged.</p> <p>Verify data pertaining to inventories and classification of species.</p> <p>On-site verification</p>	<ul style="list-style-type: none"> • Volumes, species and quantities reported on invoices match the fees charged by the ICF and municipalities. • The data pertaining inventories and classification of species agree with fees charged by the ICF and municipalities (site visits by the technician and the ICF).

			<p>Field visit to verify the correct data included on inventories and classification of species.</p> <p>Consult</p> <p>Consultations with ICF staff in charge of the field verification of the inventory data of management plans and AOPs to verify complaints or irregularities</p>

CITES

Risk	Applicable to	Indicator of legal compliance	Potential mitigation actions	How to verify legal compliance (verifier)
Timber harvested under a legally issued CITES certificate is exported	All types of forests (CITES species from plantations are exempted to have a CITES certificate)	The information included on the certificate of origin shall correspond to information declared in CITES	<p>Review and verify documents</p> <p>Statement of provenance (<i>dictamen de procedencia</i>)</p> <p>Consult</p> <p>Consultation with responsible authorities (ICF, SAG) regarding legal compliance of CITES permits issued. The issuance of CITES certificates must follow a rigorous procedure to enable coordination with systems that verify the legal origin of the product (SALH, ENCTI).</p>	<p>Find relevant key document examples in the Honduras Document Guide</p> <ul style="list-style-type: none"> All cross-border trade of CITES species must include the legally required documentation such as export certificates and permits issued by the corresponding authorities (SAG, ICF, DEI, OIRSA etc.) Minutes with the responsible authorities (ICF, SAG) shall show that the CITES species list for Honduras is being applied and respected.

CITES species are exported as non-CITES species, and thus without CITES permit

All types of forests

Species shall be correctly declared and covered by applicable CITES permit as required

Review and verify documents

- Review documents from the POA or harvesting permits, to evaluate the correct name of the species.
- Verify the Certificate of Origin required for CITES

Timber testing

Use timber testing to determine the species and origin. The following types of timber testing can be used to determine origin and species:

- DNA analysis
- Stable isotope analysis
- Wood anatomy (macro- and microscopic) analysis (for species identification only)

- Verification of the species received correspond to the species in the CITES permit.
- Timber testing results are consistent with documents containing information on origin and species

About

Supporting Legal Timber Trade

Supporting Legal Timber Trade is a joint initiative run by NEPCon with the aim of supporting timber-related companies in Europe with knowledge, tools and training in the requirements of the EU Timber Regulation. Knowing your timber's origin is not only good for the forests, but good for business. The joint initiative is funded by the LIFE Programme of the European Union and UK Aid from the UK Government.

NEPCon (Nature Economy and People Connected) is an international, non-profit organisation that builds commitment and capacity for mainstreaming sustainability. Together with our partners, we foster solutions for safeguarding our natural resources and protecting our climate.
